## FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 203

A meaningful search is not possible on the basis of all claims, because all claims are directed to methods for treatment of the human or animal body by therapy as well as to diagnostic methods - Article 17(2)(a)(i), Rule 39.1(iv) PCT.

In particular, the single independent claim 1 includes medical diagnostic steps such as displaying to a person images to test the visual perception ability of the person with respect to a visual defect, as well as medical treatment steps like selecting images designed to treat a detected visual defect and to display to the person these images until the visual perception has improved.

As a consequence, the purpose and inevitable effect of all claims is a diagnostic and therapeutic one.

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.
